

## Hosted Suite

IPCortex Hosted Suite provides full baseline business PBX functionality in a convenient hosted package and also builds in new features to improve the way that colleagues, customers, suppliers and other stakeholders communicate.

### **Joined up business**

Our systems make it easy to communicate with and share information and ideas with colleagues, one to one or in groups.

### **Exceptional customer service**

The tools you need to create a consistently excellent customer service experience.

### **Zero complexity**

Our solutions require minimal management and are very easy to use, with intuitive web-based configuration. It's simple to buy, too - we include all features as standard, and we don't lock you into any contracts.

### **Delivered to suit you, now and in the future**

Hosted Suite is a flexible service that grows and evolves along with you, whether you are looking for a standalone comms solution or would like to integrate communications with your core systems and business processes.

### **Secure conversations, no matter the media**

Our rigorous approach to provisioning security keeps your handset setup safe, with encryption for text, voice and video chat all engineered in to the system.

### **Reliable delivery with fraud protection**

Hosted Suite's resilient service architecture means it is a solution you can trust. Together with our emphasis on fraud prevention rather than detection, you'll be joining the thousands of customers that already rely on IPCortex every day.
